

BOSCH LAUNCHES COMPACT, VERSATILE SEISMIC DETECTORS WITH PATENTED TECHNOLOGY FOR SUPERIOR PROTECTION

July 10, 2007

Fairport, N.Y. — Bosch Security Systems, Inc., a full-line manufacturer of high-quality security solutions, has launched two new safe and vault seismic detectors – the Bosch ISN-SM-50 and ISN-SM-80. With their patented SENSTEC[®] sensor and micro-controller-based signal processing system, the detectors are ideal for complete 24-hour monitoring of safes, ATMs, night deposits, and strong room walls and doors.

The detectors' sophisticated digital signal processing and filters provide exceptional catch performance while virtually eliminating false alarms. These units can detect any form of attack, including explosives or attempted entry with tools, such as diamond-tipped drills, flame cutters, mechanical and hydraulic pressure tools, thermal lances or water jets.

The detectors' construction makes them easy to install. Application-specific predefined settings allow installers to quickly set the detectors for most environments. They can be used on concrete, steel, or synthetic materials, such as light weight steel. The detectors' low-profile design is the smallest in their class, making them ideal for tight spaces, such as ATMs.

Accessories for the new detectors include a mounting plate, wall recess set, watertight housing and anti-drill foils. The optional SensTool PC software makes it even easier to program detector parameters.
