

NEW BOSCH FLEXIDOME IP CAMERAS DELIVER SUPERIOR IMAGE QUALITY WITH EFFICIENT NETWORK CONNECTIVITY

June 6, 2007

FAIRPORT, New York — Bosch Security Systems, Inc., a full-line manufacturer of high-quality security solutions, has introduced FlexiDome IP cameras, which combine IP connectivity with superior digital image quality – all inside an elegant dome.

Bosch has packaged its high-performance imaging technology and network flexibility in an attractive, high-impact, and vandal-resistant enclosure. These extremely versatile network CCTV cameras are ideal for discreet surveillance. FlexiDome IP systems can play a vital role in retail and warehouses, hospitals, schools, prisons, major transport facilities and many other areas.

Customers can even incorporate Bosch video management and recording systems such as VIDOS, Bosch Video Management System, and/or DiBos Hybrid Digital Video Recorders – configuring systems to meet an even wider range of applications.

FlexiDome IP cameras are easy to install and operate. Their use of storage and bandwidth is very efficient – employing MPEG-4 video encoding and tri-streaming technology, as well as Direct-to-iSCSI recording. This allows live and recorded images to be viewed simultaneously by multiple authorized users via local area networks or the internet.

Inside the incredibly tough dome, customers can choose from Bosch Dinion or Dinion^{XF} camera technology. Dinion (NWD-455) models are high-performance 1/3-inch CCD network cameras optimized for high image quality. A host of features – including NightSense – ensure clear, sharp, high-definition pictures at all times, even in brightly backlit locations and low light situations. Increased intelligence provides powerful tamper detection, and optional Intelligent Video Motion Detection (IVMD) provides advanced video content analysis right at the camera – with functions such as tamper protection and detection of idle and removed objects and loitering.

FlexiDome^{DN} IP versions (NWD-495) add XF-Dynamic and Day/Night functionality. XF-Dynamic combines with 15-bit signal processing to provide improved sensitivity over an extended dynamic range, which allows every detail to show up in highlight **and** lowlight areas of the same scene. Day/Night cameras also include an IR filter to increase IR sensitivity for night viewing.

FlexiDome IP cameras are the latest addition to the Bosch IP camera family, which also includes Dinion IP, AutoDome Modular and Megapixel IP systems. Each of these delivers specific benefits and performance characteristics. With such a wide range of choices, Bosch ensures that customers can find the network camera system that meets the demands of their particular application.
