BOSCH EXPANDS TRAINING CATALOG WITH ACCESS CONTROL, IP OFFERINGS

Fairport, NY – Bosch Security Systems, Inc., a full-line manufacturer of high-quality security solutions, today announced the company has added five courses to its roster of training options available to technical and sales personnel.

Included in the new offerings are an IP alarm communications course and an IP video solutions class that extend .2 CEU credits to participants as part of their accreditation through the National Burglar & Fire Alarm Association's (NBFAA) National Training School. Three additional courses will focus on the Bosch Access Easy Controller, reflecting an improved training strategy for the browser-based access control system.

“Overall, the addition of these classes demonstrates our commitment to educating the industry on the latest technologies available today, such as IP solutions,” said Leon Chlimper, vice president, Systems. “By adding further training for our Access Easy Controller offering, we are helping our current customers move to a simple, but powerful, browser-based solution, while also reaching out to new organizations that want to grow their businesses in this area.”

Access Easy Controller Training

The first step in the Access Easy Controller training process is a one-hour Webinar that provides participants with an overview of the system, including unique features and benefits. This level of training is appropriate for anyone in the Bosch Certified Security Dealer program and for organizations, such as electrical contractors and low voltage installers, interested in entering the access control field.

Next, a self-paced, online course provides details on the hardware and the initial controller setup. It demonstrates how to use the system and covers card assignment and card admin setup. The e-learning approach makes training available to customers whenever it is convenient for them and at a pace that suits them best. It is accessible from any computer with Internet access.

As a final step in the training process, an instructor-led course provides a review of installation and configuration and includes advanced programming and troubleshooting topics. Participants that complete this course receive certification and 2.1 CEU credits from the NBFSA's National Training School. April 11, 2007

IP Course Offerings

In the IP Solutions class, sales personnel looking for training on IP network video can learn about Recording at the Edge and compression and image quality. The course also covers analog-to-IP migration strategies and the iSCSI storage array used in Bosch's 2nd generation of Video over IP technology for CCTV.

IP Alarm Communications describes communications trends, the benefits of IP alarm transmission — broadband speed and increased management capabilities — and the advantages of the Bosch C900V2 Dialer Capture Module with Web-based programming and intelligent phone backup capabilities.
