**Codebench and Cross Match partner for mobile FIPS 201
cardholder validation and registration solution**

COCONUT CREEK and PALM BEACH GARDENS, Fla. (June 15, 2010) — Codebench, Inc., the leading provider of HSPD-12 / FIPS-201 authentication software, announced today that it has partnered with Cross Match Technologies, Inc. to offer a mobile solution for the validation and registration of FIPS 201 PIV II compliant credentials.

Codebench's PIVCheck software suite — an end-to-end card validation, authentication, and registration solution for HSPD-12 compliance — is now integrated with Cross Match's Be.U Mobile rugged handheld reader. The mobile biometric scanner is designed for rapid mobile fingerprint capture and smart card authentication and features an integrated LCD graphic display that delivers high quality images in the field for rapid verification of subjects' identities. The Be.U Mobile reader also operates using multiple wireless interfaces and is scalable to support high user volume.

“Combining our software with the Be.U Mobile reader from Cross Match allows users to verify identities in the field in any number of challenging environments where using traditional readers would not be possible,” said Geri B. Castaldo, CEO of Codebench.

The PIVCheck software suite is a cardholder validation and registration tool that provides a seamless transition to HSPD-12 compliance. PIVCheck reads, validates, authenticates, and then registers PIV, TWIC, CAC and FRAC cards into one of sixteen different physical access control systems. After registration, PIVCheck's Certificate Manager continues to re-validate the cards' digital certificates to ensure ongoing compliance, and can suspend the card if any certificates are revoked. PIVCheck is the only listing in four of the GSA FIPS 201 Approved Products List systems categories.

“Codebench's PIVCheck software combined with our Be.U Mobile scanner delivers a rugged, robust and user friendly solution that ensures secure access through proof-positive

biometric validation against TWIC card credentials,” says Martin Petriccione, Vice President of North America Sales at Cross Match.

About Codebench

Codebench is a software development firm focused exclusively on physical security applications. A leading developer of software integration solutions, Codebench’s PIVCheck software suite was named Best Integrated System for HSPD-12/FIPS 201 Compliance by Government Security News. A certified Women’s Business Enterprise located in Coconut Creek, Fla., Codebench serves the government, Fortune 500 and academic markets. For more information, visit www.pivcheck.com or call (561) 883-3218.

About Cross Match Technologies, Inc.

Cross Match Technologies, Inc. is a leading global provider of biometric identity management systems, applications and enabling technologies to governments, law enforcement agencies and businesses around the world. These solutions are used to capture and process the unique physical characteristics of individuals to establish and verify their identities. Offerings include multiple biometric technologies capable of wireless, mobile or stationary use that encompass fingerprint, palm and full-hand scanners, facial recognition systems, iris scanning technology, document readers, biometric software, and related services.
