

BOSCH INTRODUCES NEW MID-RANGE DIGITAL VIDEO RECORDERS

February 4, 2008

FAIRPORT, N.Y. – Bosch Security Systems, Inc., a full-line manufacturer of security solutions, today announced the release of the Divar MR family of mid-range digital versatile recorders (DVRs). Divar MR combines high quality digital recording with flexible alarm handling, camera control and remote management into an integrated video management solution that is easy to install and simple to use. The powerful, yet affordable, range of new DVRs is an ideal solution for schools, retail premises, hotels, apartment buildings and many other applications.

The Divar MR delivers real-time recording and playback in CIF resolution and high resolution live viewing. With recording resolutions up to full 4CIF, Divar MR can also be used for applications where even greater detail is needed. Excellent image quality is complemented by highly efficient MPEG-4 compression to extend retention periods and reduce storage costs.

Video can be archived to USB flash drives or an optional DVD writer, and with image authentication, it can be used as evidence in legal proceedings. An archive player allows exported video to be viewed on any PC without installing additional software.

Security personnel can use a Bosch IntuiKey keyboard, a mouse, an IR remote or the unit's front panel push buttons and jog dial to operate the Divar MR – giving users the flexibility to choose the control method that best suits their needs. The system also includes Divar MR Control Center software for complete remote management, including live viewing and control, playback, configuration and alarm notification. Users can also view live images via Microsoft Internet Explorer.

The Divar MR is simple to set up and operate with a host of features that make it easy to use for security personnel, such as one-touch recording, instant playback, email-on-event, overwrite protection to keep important recordings safe, and Smart Search, which automatically looks for changes within a selected portion of a scene.

The embedded design of the Divar MR offers a higher level of security against network attacks compared to traditional systems and lowers maintenance requirements by eliminating the need for software patches and anti-virus installations.

February 4, 2008

The Bosch Divar MR family is available in eight and 16 channel models with a variety of hard drive capacities and, if required, an internal DVD writer. Interface options for various external devices cover both Bosch and third-party pan-tilt-zoom cameras.
